[NEW UPDATED SYNAPSE X CRACK MONEY WH TELEPORT MAC OS WINDOWS CRACKED VERSION1 MacOSX](#)

GREAT NEW FEATURES IN

Google SLIDES

ADD-ONS

As with Docs, Forms and Sheets, there is now functionality to have tools from third-party developers. There are only a few at this stage but Pear Deck & Unsplash look like real game-changers for presenting.

GRID VIEW

Although it's not a major deal, the ability to see all your slides in a grid is a great new feature which is particularly helpful when you have a large slide-deck. It easily allows you to move slides to the most desired position.

KEEP INTEGRATION

When you take notes and save images in Google Keep, it was tedious to flick between the apps. Now, as in Docs, click 'Tools' and 'Keep notepad' to see all your notes - so accessible to drag and drop into your presentations.

LINK & SKIP SLIDES

These handy little hacks make it possible to have slides in more than slide-deck and only having to update them once by linking and syncing. So when you update it in one presentation, it updates all the linked decks. And now you can skip slides without deleting anything too!

INSERT DIAGRAMS

Another little feature that was needed in Slides was the ability to add diagrams - flowcharts, timelines, processes, graphs. Now it exists and Google have given us a whole host of options to choose from - they are easily editable too.

USE APPS SCRIPTS

If you are a pro-coder, there is an amazing opportunity to link Sheets and other data right into Slides with the opportunity to write scripts that integrate straight in.
